18650 Battery Case

XT60 charging cable

Function diagram

Usage

• Charge

Tap the power on/off button of 18650 battery case once, but right away holding it down in the second time for about 3 Seconds.18650 battery case was turned on successfully when indicator lights are all on in turn. Set the balance charger to 2S Lithium Battery Charging Mode, insert the DC end of the above XT60 charging cable into the DC interface of the 18650 battery case , insert the XT60 end into the main charger interface of the balance charger, and then insert the balance charger interface of the 18650 battery case into the 2S balance charger interface, four battery indicator blue lights will flash in accordance with the power.

• Check the power

Tap the power on/off button of 18650 battery case, the battery indicator blue lights will flash for about 3 seconds then automatically be off (1 blue light flashing for about 25% of the electricity, 2 blue light flashing for about 50% of the power, 3 blue light flashing for about 75%, 4 blue light flashing for about 100% of the power)

• Discharge

Tap the power on/off button of 18650 battery case once, but right away holding it down in the second time for about 3 Seconds.18650 battery case was turned on successfully when indicator lights are all on in turn. When the four blue lights are off in turn (means the lack of electricity), please charge in time. When the last battery indicator blue light flashes with quick frequency then it will automatically shut down after 60 seconds.

• Shut down

Tap the power on/off button of 18650 battery case once, but right away holding it down in the second time for about 3 Seconds.18650 battery case was turned off successfully when indicator lights are all off in turn.

Specification

Input	Lithium battery 2S balance charger
Output	7-8.4V/2A
Built-in battery size	2×18650 battery
Size	85*53*23mm
Net weight	44g(w/18650 battery)
LED Lights	4pcs
Connectors	DC power in/out
	Balance charging in
